Survey Notes:

All deficiencies have been prioritized by building system type and level of criticality. Related deficiencies have been grouped and matched as best as possible to the DOE general description categories (see below). In general, the categories include but are not limited to:

Site Level, including "Other": Parking, drop-offs, drainage, walkways, courts (for P.E. instruction), fencing, Pre K, ESE playgrounds.

Paint/Finishes: Stucco damage, millwork (frames, baseboards and moldings), wall damage.

Floor Coverings: Ceramic tile, vinyl tile, carpeting and wood floor repairs and replacements.

Windows and Doors: Doors, windows, frames and hardware.

Lighting: Interior & exterior lights and special purpose lighting.

Electrical: Grounding, outlets, wiring, metering, transformers, generators, disconnects, panel boards.

Plumbing: Water & sanitary distribution, full membrane roof replacements, fixtures, valves, water heaters.

Restrooms: ADA (Americans with Disabilities Act) type deficiencies including those not related to restrooms like door thresholds, accessible routes, ramps, accessible parking spaces, elevators & lifts.

HVAC: Chillers, pumps, cooling towers, boilers, controls, condensing units, air handler units & ventilators, fans.

Bell/Fire Alarm: Fire Alarm, P.A., bell & clock systems, fire sprinklers, emergency & exit lighting.

Technology: Wiring, data ports, telephone, outlets, wiring, wireless technology and CCTV systems.

Note: The work on related deficiencies may be spread out over several years within a category. For example, under "Paint/Interior & Exterior Finishes", millwork, door and window frames, base boards, moldings and cabinetry replacement may be done one year and paint on the next. Under "Bell/Fire Alarm Systems" the fire alarm may be replaced one year and the clock/bell/P.A. system the next. Under the "HVAC" Category, the A/C Chiller unit may be replaced one year and the air handler units the next

PREFACE

Report of an educational plant survey, hereinafter also referenced as "survey," conducted in accordance with the requirements of, and pursuant to specifications in, Article IX and Article XII of the Florida Constitution; Chapters 1001, 1011, and 1013, Florida Statutes (F.S.); State Requirements for Educational Facilities (SREF); and the Florida Building Code (FBC). This survey report describes the current educational plants and the estimated capital outlay needs resulting from a systematic study of present educational and ancillary plants. This study also addresses the future needs, including long range planning, to provide an appropriate educational program and services for each student based on projected capital outlay FTE's (COFTE) approved or authorized for use by the Department of Education.

NOTE: All educational plant surveys are valid for five full years and expire on June 30 of the fifth full year from the beginning date of the survey. For example, a survey approved in October will be valid through the remaining fiscal year and for five full years beginning on the following July 1; effectively, this makes the survey approved in October valid for five years and eight months. By the same scenario, a survey approved in May will be valid through the remaining fiscal year and for five full years beginning on the following July 1; effectively, this makes the survey approved in May valid for five years and one month.

INTRODUCTION TO THE EDUCATIONAL PLANT SURVEY

Definition of an Educational Plant Survey

The educational plant survey is a systematic study of present educational and ancillary plants and the determination of future needs. The survey is not directly concerned with the instructional program but the relationship of educational plants to the instructional program is such that judgments regarding the instructional program are necessarily a part of an educational plant survey.

Purpose of an Educational Plant Survey

The construction of new educational facilities is a major undertaking even in school systems where such construction is a continuous process. If a 50-year capital investment is to be protected, the location, size, type of materials, arrangement of spaces, and other considerations, regarding each new facility or addition to an existing facility must be determined on the basis of reliable, factual data. To do otherwise would violate the trust of present and future generations of children and of taxpayers.

The purpose of an educational plant survey is to aid in formulating plans for housing the educational activities of students and staff of the school district for the next several years and the survey must consider the local comprehensive plan in its forecast strategies. The development of this plan must be based on a careful study of all available data regarding the current status of educational and ancillary facilities in relation to capital outlay full-time equivalency (COFTE) student membership and the projected changes in COFTE student membership. The intent of a regular, formal educational plant survey is to encourage the thoughtful, orderly development of a program for providing educational and ancillary plants to adequately house the educational and academic support activities of the district.

A formal educational plant survey is required by §1013.31, F.S., to be conducted every five years, but may be conducted as often as necessary. It is sometimes necessary to make changes to the survey recommendations in the interim. Local school administrators are responsible for a regular auditing of survey recommendations and for the initiation of the request for any necessary changes.

Legal Basis for Educational Plant Surveys

When the Florida School Code of 1939 was developed, the importance of having a valid basis for a school building program was recognized by inclusion of the requirement that district school boards have periodic school plant surveys of building needs in the districts. The 1939 Code directed the district school superintendent to "recommend plans and procedures for having a survey made" and instructed the district boards to "approve and adopt a district-wide school building program...based on the recommendations of the survey."

The provisions in the 1939 Code for periodic school plant surveys were, for the most part, ineffective. No state financing program for school plants was in effect at that time. Further, the coming of World War II, and the resulting cessation of school plant construction, made any statutory provision relating to school plants meaningless.

When the Minimum Foundation Program law was enacted in 1947, the requirement for periodic school plant surveys was included. The law established that a Capital Outlay and Debt Service (CO&DS) annual allotment of \$400 per instruction unit had to be expended in accordance with a planned building program based on a school plant survey. It was at this point that Florida's school plant survey program became a meaningful and established operation.

In 1952, the Florida Constitution §9(d), Article XII, was amended to authorize the issuance of State Board of Education (SBE) bonds guaranteed by the Minimum Foundation Program CO&DS allocation. The SBE bond program led to major school construction activities and further strengthened the school plant survey program by requiring that bond proceeds be expended in accordance with survey recommendations.

In 1957, the Florida Legislature established the School Construction Fund which annually authorized an increase of \$200 per student in average daily attendance, subject to matching by local funds. School Construction Fund monies also had to be expended in accordance with the recommendations of a school plant survey. The program was continued with modifications by subsequent legislatures until 1972.

The 1972 Legislature enacted the School District Supplemental Capital Outlay Act as an interim measure pending the outcome of the proposed amendment to §9, Article XII of the Constitution. The amendment, which was ratified in the November 1972 general election, increased the CO&DS annual allotment from \$400 to \$600 per instruction unit in the school districts for the school fiscal year 1967-1968 plus \$800 for each "growth unit" since 1967-1968.

The 1973 Legislature established the Florida Educational Finance Act which provided funds for comprehensive school construction and debt service. The amount allocated to each school district was determined by formulas prescribed by the Legislature.

In 1974, the Florida Constitution, §9(a) (2), Article XII, was amended to authorize the issuance of state bonds guaranteed by revenues derived from gross receipts utility taxes for the state system of public education, including, but not limited to, institutions of higher learning, junior colleges, vocational-technical schools, and public schools, as defined by law.

Since 1974, regular changes have been made to statutory provisions and the Florida Constitution in regards to educational facilities, including the establishment of a state lottery where funding is specifically earmarked for education as a supplement to other state funding, and the capping of class sizes. The continual changes to educational laws and funding mechanisms are due, in part, to Florida's unrelenting effort to maintain and provide state-of-the art facilities to meet the demands of change for our schools programs and the expectations of our citizenry.

Method For Making Educational Plant Surveys

The board must arrange for an educational plant survey to be conducted either by district staff, through contractual agreement, or a combination of district staff and private vendors. A survey conducted by the Office of Educational Facilities is a cooperative process with staff from the Office of Educational Facilities and staff from school districts outside of the district being surveyed. Typically, the survey process will include, as a minimum:

- * Spot or grid maps showing the residence of all elementary, middle or junior high, and senior high school students, the school attended by each student, and the location of each school.
- * COFTE student membership trends of each school center for the past five years.
- * A floor plan for each building at each educational plant identifying each building and each room (space) by number as they appear in the Florida Inventory of School Houses (FISH).
- * A list of the construction projects under contract.
- * A statement of the policies of the board with respect to grade organization and the types and sizes of facilities to be provided for new elementary, middle or junior high, and senior high schools (facilities lists).
- * Other information that may affect building costs, population trends, and other related matters that may influence the district educational facilities building needs program.
- * The survey team members visit and evaluate each educational plant; student capacities are carefully evaluated at each school center.
- * The districtwide projection of students is distributed among the various existing school centers and any new school centers are recommended on the basis of past trends and the best judgment of both the District and the County Growth Management Office as to where growth is most likely to occur.
- * The survey team should make logical recommendations based on all relevant information available.

The survey is limited to the study of educational and ancillary plants owned or under long-term lease agreement by the school board. No comprehensive study is made of the instructional program and recommendations made for the improvement of the educational and ancillary plants of the district are not an evaluation of the instructional program. Recommendations, however, must be clearly associated with the relationship between educational facilities and instructional programs.

State-level Requirements

The survey report must include a recommended pattern for housing the student projection for a five-year period, including changes in utilization of existing school centers, phasing out of unsatisfactory facilities and/or school centers, additions at existing school centers, and construction of new school centers. Ancillary facilities should also be considered in the recommendations.

The broad, general state-level conditions that give directions to a survey are established as guidelines only insofar as feasible for application within a given district.

EDUCATIONAL PLANT FIVE YEAR SURVEY REPORT

District:

13-DADE COUNTY SCHOOL DISTRICT

Survey:

Survey: 4 - Version: 1

Status:

Active Approved

-
- * School Size: Any school that is not large enough to justify a full-time principal, a media specialist, food service staff, and special instructional and clerical staff are economically inefficient and restrictive in program offering; simply stated, minimally sized schools are too expensive to operate if a district lacks sufficient financial resources to make such facilities a viable option. Generally, new school centers are not recommended for fewer than 400 students in elementary schools or 100 students per grade level in secondary schools. Where practical, existing schools that are below these sizes should be consolidated.
 - * Wooden Buildings: Generally, all wooden exterior buildings (other than relocatables) are considered unsatisfactory and are not assigned student capacity.
 - * Unsatisfactory Space: Generally, all wooden exterior buildings (other than relocatables) are considered unsatisfactory and are not assigned student capacity.

NOTE: Unsatisfactory space is typically designated as such due to compromising effects on the structural integrity, safety, or excessive physical deterioration of a building. Space condition should be the same, either satisfactory or unsatisfactory, for all rooms in a building with the exception of rooms reported in relocatable buildings that represent individual units. A space may be structurally unsound (unsatisfactory) and still be adequate in size.

- * Inadequate Space: Generally means that the size of space is not appropriate, sufficient, suitable, or lacks ability to meet the fitting requirements for instruction or instructional support, such as small classrooms or insufficient acreage for a school site. Inadequacy may be a condition brought on by changing standards, or increased enrollment causing overuse thereby resulting in undersized or unsuitable circumstances.

NOTE: Inadequate space is typically designated as such by the capital outlay classifications (COC) C-3 and C-7. Inadequate is a designation for an entire facility, not just a building or room. A space or building may be structurally sound (satisfactory) and still be inadequate.

- * Relocatable Building: Facilities designed and built to be moved from one school to another are recognized as providing valuable flexibility.
- * Student Station: A student station is the area necessary for a student to engage with a teacher in appropriate subject matter educational (learning) activities. The size of this area will vary with the particular type of activity and by grade level. A laboratory or shop in which the student must move about requires more area per student than a regular classroom where the student remains seated at a desk. The total student stations at a school center are used to determine the capacity of the school.
- * Student Capacity: The maximum number of students that should be housed in a facility. In an elementary school, students are typically assigned to one classroom throughout the day and student capacity for elementary schools equals the student stations. However, in middle and secondary schools, students usually move from classroom to classroom to participate in different instructional subject matter, which interjects scheduling as a factor in calculating capacity. Experience has shown that the number of students in a secondary school is a major factor for determining the efficiency of space utilization that may be expected at a school.

EDUCATIONAL PLANT FIVE YEAR SURVEY REPORT

District:

13-DADE COUNTY SCHOOL DISTRICT

Survey:

Survey: 4 - Version: 1

Status:

Active Approved

* Utilization Factor: Used to determine "capacity" which is the number of students that may be housed in a facility at any given time based on a utilization percentage of the total number of existing satisfactory student stations:

Type School	Utilization Factor Percentage x	Satisfactory Student Stations
Elementary	100%	all
Middle & Junior High	90%	all
Senior High	70%	300 or less
	75%	301-600
	80%	601-900
	85%	901-1200
	90%	1201-1500
	95%	1501 - and above
Combination Schools	90%	all
Exceptional Student Centers	100%	all
Alternative Education Centers	100%	all
Designated Area Vocational Centers	120%	all
Designated Adult Centers	150%	all

* Initial and Ultimate Student Capacity: In the recommendations for building a new school center, the initial capacity assigned is the capacity necessary to house the students anticipated to enroll at the school by the end of the survey projection period. The ultimate capacity is usually the maximum capacity school of that type based on applicable district policies (facilities lists). The establishment of an ultimate desirable capacity makes it possible to plan the initial construction within the framework of the ultimate size school-meaning, building core facilities such as media, cafeteria, administration, circulation, and other auxiliary spaces to the full school size and then adding classrooms as the student population projections increase to a level that warrants additional classroom space.

NOTE: Educational plant survey COFTE student projections are determined by the Office of Economic and Demographic Research (EDR). Each five-year survey is based on COFTE projections that are five (5) full years from the official beginning of the survey period, which is July 1 of the first full year of the survey.

* Use of State and Local Funds for Recommended Facilities: The recommendations made in the survey report are intended, in total, to provide adequate facilities for all of the students projected to be enrolled within the 5-year survey period. The priority systems established in statutes and rules define the eligibility for the expenditure of funds.

EDUCATIONAL PLANT FIVE YEAR SURVEY REPORT

District:

13-DADE COUNTY SCHOOL DISTRICT

Survey:

Survey: 4 - Version: 1

Status:

Active Approved

NOTE: Educational plant survey costs for student stations are determined by the Office of Economic and Demographic Research (EDR). Each five-year survey is based on cost factors that are 31 months (January, the midway point of the five-year survey period) from the official beginning of the survey period, which is July 1 of the first full year of the survey. All new capacity construction uses the appropriate grade level student station cost factors; the cost per square foot for new construction, remodeling, and renovation is based on actual statewide average construction cost data with the EDR cost index increase applied to use the same 31 months mid-point of the survey costs for planning purposes. This cost estimate process is applied uniformly to all surveys in all districts so that consistent estimates can be made. Actual costs are reported yearly in the 5-year district facilities work program annual budget.

District School Board Policies and Prerogatives

State funds alone usually are not enough to complete the recommended school plant construction program that will be identified in an educational plant survey. To ensure that all capital outlay funds are used for the best and most efficient purposes, the educational plant survey team should collaborate with the professional and instructional staff of the district on a plan for meeting the projected school plant needs for the next several years.

Some of the specific local board policies and prerogatives that generally apply to the survey report are:

- * Actual assignment of students to school centers in the county as authorized and directed by §1003.02, F.S.;
- * Facilities comprising a standard school plant for each grade grouping;
- * Square footage and special features of each instructional component (state minimums must be met);
- * Special facilities at a school center;
- * Level of custodial service;
- * Level of maintenance service;
- * Level of service indicators for local comprehensive planning;
- * Type of climatic control.

Guide to Capital Outlay Classification (COC)

Educational plants are identified by recommended type of facility for capital outlay expenditures. The COC of educational plants determines the extent to which certain funds may be used for capital improvements, subject to applicable Florida Statutes and SREF standards dealing with budgeting and in some cases priority ratings. The COC of an educational plant can only be assigned or changed by an educational plant survey recommendation made in compliance with all applicable laws, rules, and policies.

The COC is grouped into categories with applicable standards to guide the assignment of the appropriate classification:

C-1: An educational plant that is recommended for continued use. Generally, this includes:

- * Adequate site,
- * Satisfactory building(s),
- * Projected membership within desired size range for the type of school,

EDUCATIONAL PLANT FIVE YEAR SURVEY REPORT

District:

13-DADE COUNTY SCHOOL DISTRICT

Survey:

Survey: 4 - Version: 1

Status:

Active Approved

-
- * Recommended new educational plant.

C-2: An educational plant that is in a period of transition with evidence insufficient to recommend replacement or consolidation, and typically new construction is not recommended for this COC. Generally, this includes:

- * Inadequate site and/or inadequate building(s),
- * Declining or static enrollment,
- * An educational plant that probably would be recommended for consolidation if not for excessive distance required for student transportation.

C-3: An educational plant that is substandard in one or more major aspects. Generally, this includes:

- * Inadequate site and/or unsatisfactory building(s),
- * Declining or static enrollment to a level indicating that the needs of students can better and more economically be served at other educational plants,
- * Abandoned educational plants not currently housing students.

NOTE: Educational plants assigned a C-3 COC and used to house students should be closed when adequate facilities are available elsewhere. Facilities assigned a C-3 COC do not generate PECO maintenance funds even when the facility contains satisfactory space.

C-6: Ancillary facility recommended for continued use. Generally, this includes:

- * Adequate site,
- * Satisfactory building(s),
- * Recommended new site and/or facilities.

C-7: Ancillary facility is substandard. Generally, this includes:

- * Inadequate site and/or unsatisfactory building(s),
- * Abandoned facilities not currently being used.

NOTE: Facilities assigned a C-7 COC that are in current use should be closed when adequate facilities are available elsewhere. Facilities assigned a C-7 COC do not generate PECO maintenance funds even when the facility contains satisfactory space.

C-9: Any district owned facility leased to an entity for use by the lessee for any purpose, including educational, but is not used by the district during the normal school hours of operation.

NOTE 1: Facilities assigned a C-9 COC do not generate PECO maintenance funds.

NOTE 2: Facilities assigned a C-9 COC are to be counted in the district's inventory of available space and may be considered in the determination of new construction needs.

EDUCATIONAL PLANT FIVE YEAR SURVEY REPORT

District:

13-DADE COUNTY SCHOOL DISTRICT

Survey:

Survey: 4 - Version: 1

Status:

School centers are usually classified by standard grade groupings (K-5, 6-8, and 9-12), even though a school may have only one or two of the grades present. A school center may be classified as a combination school and recommended to house more than one grade grouping, e.g. grade group K-8, grade group 6-12, or grade group K-12.

Whenever it is feasible, the survey should contain recommendations to upgrade and/or remodel/renovate existing educational plants that are classified as C-1 to meet the district's educational facilities standards for spaces and school size based on the districts adopted facilities lists for each grade grouping.

GUIDELINES FOR SCHOOL PLANT DEVELOPMENT

School Plant Planning

Planning a school plant, either a complete new school or an addition to an existing school, is a long and complex process when properly done. Remodeling and renovation of existing space can also be very time consuming to plan when all potential options for upgrading or replacement considerations are made. Suggestions made in this section are intended to provide useful, basic information and are not an exhaustive description of all available options for planning or meeting the facilities needs of a district school board.

School Size

Generally, new school centers are not recommended for fewer than 400 students in elementary schools or 100 students per grade level in secondary schools. Any school that is not large enough to justify a full-time principal, a media specialist, food service staff, and special instructional and clerical staff are economically inefficient and restrictive in program offerings. Schools that are minimally sized are very expensive to operate.

The number of students in a school is a major factor in determining the efficiency of space utilization; schools that are too small do not offer optimal instructional standards or provide economically advantageous structures. Just like small schools are not economical, very large schools are not frugal to build, maintain, or staff. The logistics of managing and maintaining an overly large school can outweigh the reasons for building mega structures (such as more extensive program offerings in science or performing arts-these functions may be offered through magnet schools, thereby meeting a districtwide or area need without the burden of managing an overly large school reconfigured to offer such services).

Optimally, elementary schools should be planned for about 800 students, middle schools should be planned for about 1,200 students, and senior high schools should be planned for about 2,000 students. Flexibility and program offerings that allow schools to offer a more educationally diverse program or structural configurations that can provide significant economic rewards should always be considered when planning new schools. However, experience has shown that by modifying elementary schools sizes by more than 25% above or below the 800 student mark is not usually cost effective nor educationally practical. Secondary schools can sometimes be subjected to 25% to 50% modifications from the recommended median point and still be practical and efficient for both educational offerings and cost savings. Neither small or large schools provide cost saving benefits for construction nor for day-to-day operations; therefore, limiting the size of schools to near average size is usually preferable and more practical.

Educational Facilities Planning

The basic concept behind educational facilities planning is a simple one. A school building is primarily a school and secondarily a building. If the "school" is not planned in terms of its purposes, its scope, and its programs, the resulting structure will almost certainly just be a "building." No architect, regardless of talent or experience in school plant design, can plan a school without guidance from the educators who will use it.

The educational facilities planning process is slow and difficult; planning that does not consider school needs beyond the immediate future places an undue burden on the present and future generations of students and taxpayers. Equally as important as long-range planning, no board should commit local and state revenues for a new educational plant that has not been planned by educators. Although the detailed procedures for educational facilities planning will vary considerably from school to school, the ultimate responsibility for the future rests with those professionals who plan today.

School Plant Design

An architect is responsible for designing the building to house the school program developed through the educational facilities planning process. Usually, the architect participates in that process so that educational planning and design do not constitute separate and distinct steps.

The architect uses other specialists in designing the building and the system(s) it will contain; for example, structural engineers, heating and cooling specialists, electrical engineers, and environmental specialists should be involved in the total process. Some broad guidelines appropriate to school building design are:

- * A site (plot) plan should be developed to show the most effective use of the site for present needs and to guide future expansion. The site design and orientation should show awareness of the principles of "Crime Prevention Through Environmental Design" (CPTED) including natural access control, natural surveillance, and territorial reinforcement;
- * A building should be functional in design; it should meet the needs of and facilitate the attainment of the designed or planned program of the school;
- * The building must be made safe and healthful for all students and school staff personnel by observing all safety and sanitary regulations appropriate to school plants;
- * A balance should be achieved between quality and economy in construction and the anticipated maintenance and operation of the plant;
- * A building should be designed to permit economical expansion both in terms of additional classrooms and special facilities which will eventually serve the ultimate capacity of the school; e.g., media centers, cafeterias, circulation, sanitation, utilities, and administration should be built to their ultimate maximum sizes if additional classrooms are going to be needed for future expansion;
- * Adequate lighting, natural and artificial, should be provided for all instructional spaces;
- * A building should be designed to control the transient noise level; the objective in sonic design of instructional spaces is to secure the best hearing and speaking conditions without adversely affecting the surrounding or adjacent instructional programs;
- * Thermal conditioning of school spaces should be provided by economically designed systems that also render long-term cost savings in maintenance and operations.

Florida Inventory of School Houses (FISH)

The district's educational plant survey extracts facilities data from FISH; therefore, if FISH is not current and accurate, the educational plant survey cannot be a valid assessment of needs. The district's facilities inventory may be corrected at any time when new additions or remodeling occurs, during a validation study conducted by the district or OEF, or as the result of an educational plant survey. FISH is the official inventory of the district's educational facilities. It is the responsibility of the district to maintain an updated inventory. Changes to FISH are subject to review by OEF for compliance with statutory and rule provisions as well as compliance with educational plant survey recommendations.

NOTE: FISH data is imported into the educational plant survey as it exists the moment the survey is created. When a complete new survey is started, the FISH data is imported and does not change even if FISH changes are subsequently made. When a supplemental/spot survey is created, FISH data is imported into the spot survey as it exists for only the selected facilities as of the moment the spot survey is created; this process allows districts to update FISH and then do an updated survey using current FISH data.

School Sites

Before a site is purchased or funds are encumbered for a site, it must meet the criteria established by §1013.36, F.S. Notably, the law requires a school board to coordinate site planning and selection with affected county and city governments to ensure consistency with local land-use plans. This coordination process is detailed in the interlocal agreement between the school board and the general-purpose local governments pursuant to §1013.33(2), F.S.

The choice of sites for new schools is critical to the overall development of a school plant program. In general, new sites should:

- * Provide adequate space for school buildings;
- * Provide adequate off-street parking and off-street loading/unloading;
- * Provide adequate playground area.

In addition, new sites should generally be located to:

- * Minimize transportation costs and provide safe access from neighborhoods to the school;
- * Avoid sites where adjacent land uses may allow the location of undesirable commercial enterprises or industrial activities near the school;
- * Prevent the location of a site adjacent to, or near, high voltage power transmission lines or in an airport approach flight path;
- * Maximize proximity to residential areas and seek to collocate district educational facilities with other public facilities, such as parks, libraries, and community centers.

FACILITIES LISTS

Minimum Space Requirements

The Facility Lists component identifies the standard schools programs by grouping and listing the classrooms and support spaces that districts normally consider the most ideal for meeting the districts needs. These lists usually are a combination of elementary, middle, senior high, ancillary, and other special school centers such as exceptional students, alternative, and various types of combination schools, e.g. K-8, K-12, 6-12, etc.

All board approved and adopted facilities lists must conform to standards established in SREF. The facilities lists in EFIS are based on net square footage per space; the gross square footage in a facilities list for new construction is determined by adding a standardized percentage of the net square footage for all auxiliary and support spaces. Elementary schools have 27 percent added for net-to-gross conversions; middle schools have 32 percent added for net-to-gross conversions; and high schools have 34 percent added for net-to-gross conversions. An additional 6 percent is added to each type school for mechanical spaces.

Educational plant survey costs for student stations are determined by the Office of Economic and Demographic Research (EDR). Each five-year survey is based on cost factors that are 31 months (January, the midway point of the five-year survey period) from the official beginning of the survey period, which is July 1 of the first full year of the survey. All new capacity construction uses the appropriate grade level student station cost factors; the cost per square foot for new construction, remodeling, and renovation is based on actual statewide average construction cost data with the EDR cost index increase applied to use the same 31 months mid-point of the survey costs for planning purposes. This cost estimate process is applied uniformly to all surveys in all districts so that consistent estimates can be made. Actual costs are reported yearly in the 5-year district facilities work program annual budget.

Costs for remodeling recommendations are typically based on one-half the cost of new construction, but may vary significantly based on the type of remodeling. Costs for renovation recommendations are typically based on one-third the cost of new construction, and like remodeling costs, may vary significantly based on the renovation project. All cost estimates are best judgment approximations and may vary significantly between projects. Before entering into the planning phase on projects, the district should have a professional review of the estimated cost and assure that the current Uniform Building Code standards are applied when the cost estimates are made.

Cost estimates and recommendations for maintenance and operations of educational plants safety and sanitation deficiencies are not included in this survey. Boards should follow the requirements of §1013.12, F.S., to meet the needs in these areas.

Facilities recommended in accordance with the approved facilities lists at existing or recommended new schools may need to be changed as programs change.

Building New Schools Or Additions To Existing Schools Relative To Approved Facility Lists

All facility lists are developed and approved by a district school board to establish the district's standard schools by type and for the ideal size of schools. These lists, once approved by the board and by the Department, are used in the educational plant survey process to identify the space needs of existing schools (comparing FISH and COFTE to the facility lists) and for building new schools. Any new schools constructed or the expansion of existing schools must be relative to the approved facility list and the classroom capacity must not exceed the projected COFTE for that/those schools. When building a new school center or adding classroom capacity to an existing school, the capacity of the instructional spaces (classrooms) for the school may not exceed the projected COFTE planned for the school in the out-year of the survey even though the facility list may be for a larger number of students. The school's core facilities should be built to the full size of the facility list if it is reasonably anticipated that the school will eventually serve the number of students in the facility list; however, the classrooms must initially only be built to serve the projected COFTE; to do otherwise would violate the public trust and abuse tax-payer money.

Survey Annotation	The playground will be funded with General Obligation Bond (GOB) money. Building 7 is being transferred to this facility from Westview Middle(facility 253), which is located adjacent to it. An acre of land will be also tranferred. The cost of construction is not accurate since the building is only being transferred from one facility to the other; however, the building will have renovations at a cost of 93,340.
