Carnegie Learning: MATHia

Carnegie Learning web-based MATHia software is a blended curriculum for mathematics instruction in sixth, seventh, eighth grade, Algebra I and Geometry courses within the iPrep Math classrooms. The MATHia software engages students by personalizing instruction for individual students. Other key components include active learning to building a deep understanding of mathematics; problem solving to encourage comparison and self-explanation by promoting conceptual knowledge; finally, the game-like fluency tasks help students recognize mathematical relationships, build representational and procedural fluency. The adaptive software provides students opportunities to master skills while they self-pace their learning.
